

Features

- ESD Protect for 1 Line with Unidirectional.
- Provide ESD protection for a line to **IEC 61000-4-2 (ESD) $\pm 24\text{kV}$ (air), $\pm 18\text{kV}$ (contact)**
IEC 61000-4-4 (EFT) 60A (5/50ns)
- Suitable for, **12V and below**, operating voltage applications
- Ultra Small package saves board space
- Protect one I/O line or one power line
- Fast turn-on and Low clamping voltage
- Solid-state silicon-avalanche and active circuit triggering technology
- **Green part**

Applications

- Cellular Handsets and Accessories
- Small Panel Modules
- PDA's
- Portable Devices
- Digital Cameras
- Touch Panels
- Notebooks and Handhelds
- MP3 Players
- Peripherals

Description

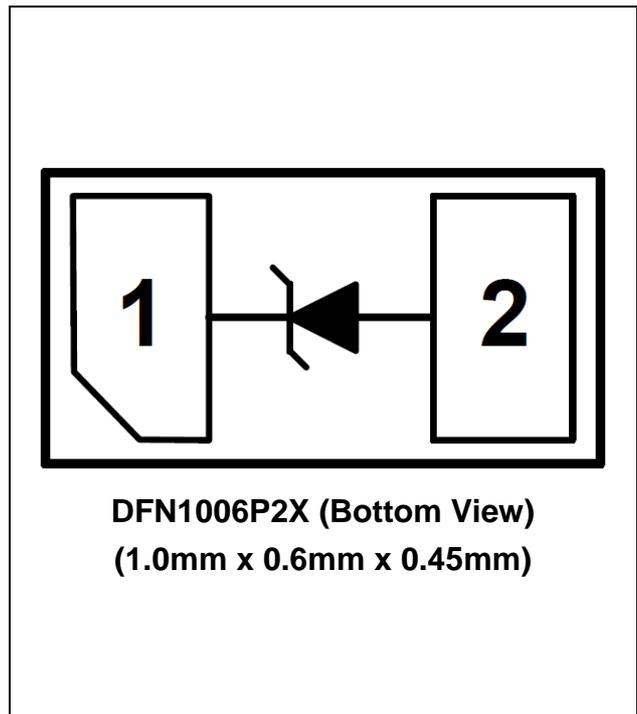

AZ4012-01F is a design which includes a unidirectional surge rated clamping cell to protect one power line, or one control line, or one low speed data line in an electronic systems. The AZ4012-01F has been specifically designed to protect sensitive components which are connected to power and control lines from over-voltage damage and latch-up caused by Electrostatic Discharging (ESD), Electrical Fast Transients (EFT), and Cable Discharge Event (CDE).

AZ4012-01F is a unique design which includes proprietary clamping cell in a single package.

During transient conditions, the proprietary clamping cell prevents over-voltage on the power line or control/data lines, protecting any downstream components.

AZ4012-01F may be used to meet the ESD immunity requirements of IEC 61000-4-2, Level 4 ($\pm 15\text{kV}$ air, $\pm 8\text{kV}$ contact discharge).

Applications Information

ESD Protection for Battery Contact

The AZ4012-01F can be used to protect the Battery Contact. The ESD protection scheme for typical Li-ion battery pack is shown in Fig. 1. In the Fig. 1, the pin 2 of AZ4012-01F should be connected directly to a ground plane (Pack- terminal) on the board. The pin1 of AZ4012-01F connected to the terminal of Pack+.

All the path lengths connected to the pins of AZ4012-01F should be kept as short as possible to minimize parasitic inductance in the board traces.

In order to obtain enough suppression of ESD induced transient, good circuit board is critical. Thus, the following guidelines are recommended:

- Minimize the path length between the protected lines and the AZ4012-01F.
- Place the AZ4012-01F near the input terminals or connectors to restrict transient coupling.
- The ESD current return path to ground should be kept as short as possible.
- Use ground planes whenever possible.
- NEVER route critical signals near board edges and near the lines which the ESD transient easily injects to PCB internal circuit.
