

## 3.3V/5V 1 GHz Differential PECL/ECL Receiver/Buffer

### Features

- Maximum Frequency >1.0 GHz
- 3.3V and 5V Power Supply Options
- 250 ps Typical Propagation Delay
- High Bandwidth Output Transitions
- Internal 75 k $\Omega$  Input Pull-Down Resistors
- 100k PECL/ECL Compatible
- Open Input Default State
- Industrial Temperature Range:  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$
- Available in an Ultra-Small 8-Pin 2 mm x 2 mm DFN Package

### Package Type

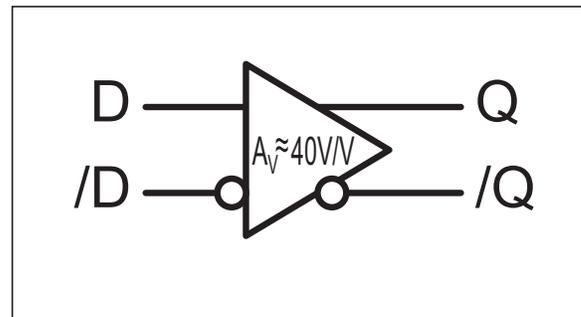

### General Description

The SY89206V is a differential PECL/ECL receiver/buffer in a space-saving (2 mm x 2 mm) DFN package. The device is functionally equivalent to the SY100EL16V, but features a 70% smaller footprint.

The SY89206V provides a VBB output for either single-ended use or as a DC bias for AC-coupling to the device. The VBB pin should be used only as a bias for the SY89206V as its current sink/source capability is limited. Whenever used, the VBB pin should be bypassed with a 0.01  $\mu\text{F}$  capacitor to VCC.

Under open input conditions (pulled to VEE), internal input clamps will force the Q output LOW.

- Note 1:** Devices are designed to meet the DC specifications shown in the above table after thermal equilibration has been established. The circuit is in a test socket or mounted on a printed circuit board and transverse airflow greater than 500 lfm is maintained.
- 2:** Outputs are terminated through a  $50\Omega$  resistor to  $V_{CC} - 2.0V$ .
- 3:** The CMR range is referenced to the most positive side of the differential input voltage. Normal operation is obtained if the high level falls within the specified range and the peak-to-peak voltage lies between 150 mV and 1V.

NOTES:

## APPENDIX A: REVISION HISTORY

### Revision A (June 2019)

- Converted Micrel document SY89206V to Microchip data sheet DS20006210A.
- Minor text changes throughout.
- Removed all reference to the EOL SY89216V.
- Updated DC and AC parameter tables in the **1.0** “**Electrical Characteristics**” section.

### Revision B (August 2019)

- Updated minimum value for Common Mode Range in [DC Electrical Characteristics \(Note 1\)](#).

**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as “unbreakable.”

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.
